

Bees

Name: June Brabant

Name of Teacher: Mrs. Stone

Name of School: Union Springs Middle School

Did you know that Queen bees can lay 2,000 eggs a day?! This is only one of many reasons that I thought that the most important thing that I learned at Conservation Field Days was the Bees. The Union Springs 6th grade went to Conservation Day for a field trip. Conservation Days was where we went to different stations and we learned different things, like bees.

I learned the jobs of all the bees. The Queen bee lays all the eggs this means the Queen bee is a very important bee. Then the drone mates with the Queen and after they mate the drone dies. Also the worker helps keep everything clean, the worker is also pretty important because the worker does everything for the queen. The worker cleans the cell, when a bee gets out of their cell. The jobs of the bees are very important. Did you know that all worker bees are girls, all drones have to be boys and the Queen is always a girl, there can never be a king. This is why I think bees are important and the best thing we learned at Conservation days.

I also learned how long it takes for the bee to develop in their cell. The Queen takes about 10 days to develop in her cell. The workers take 21 days to develop in their cell. The drone takes 24 days to develop. The drone takes the most time to develop and the queen bee takes the least amount of days in the cell. I think it is very important to learn about the bees and the bees' growth.

The thing I learned and thought was most important was the Bees because I think Bees are very cool and there is a lot of good information. The reason why I think that the Bees are the most important is because they are helpful when we grow food. They are so fascinating too. They help us to grow our food and have honey for our throats. This is why I think that the Bees were the most important thing I learned at Conservation Field Days.
