Trees. Probably one of the most important plants in the world, is going to be my topic today.

78 words First, lets talk about how a tree grows and what it needs to do so. Trees, like most plants need 3 things to create there own food. Sun, water, and nutrients.

Those 3 things combine to create food for the trees. Trees start from a tiny seed, to a sapling, to a tree! there are also different types of trees. A lot in fact but the main 2 are sycamore and disiguis.

Disiguis trees loose there leaves but sycamore actually don't!

There are also people that cut trees down. Including

loggers and foresters. Some people may think that

96 words loggers and foresters are the same thing but they

are actually 2 different jobs. Foresters have more of an

education in their field of study. Like they have to

know what type of trees they are cutting down. loggers

may cut down trees for a lumber mill or work for

a company that cuts trees down whereas, a forester

will cut down trees to be able to grow more trees.

So, if too many trees grow in one spot some

of the trees might block sunlight for other trees.

19 words
So a forester will cut down or prune some of the trees so other trees can have more sunlight.

105 words
Finally logging is one of the most dangerous professions because they have to use a chain saw, and there are always falling logs, axe's, and possibly heavy machinery. So loggers and foresters have special protective gear to protect them, such as, a helmet, chainsaw chaps, and safety glasses. Also loggers and foresters can shout "timber!!" when a tree is falling down to warn other people in the area that there is a falling tree. I do not think I would want to be a forester or a logger because it sounds like a very dangerous profession even though I bet it would make a lot of money.

12 words
Fun fact: trees store carbon in their wood they also produce oxygen.
