"The Most Important Thing That I Learned at Conservation Field Days"

My class recently attended the Cayuga County Conservation Field Days. All of the stations that we went to were extremely informative, but there was one booth that was my favorite. I liked this booth because I learned the most at this booth, and I like learning new things. This booth was the booth called SCUBA.

This booth was about Owasco Lake and all of the good and bad things about it. It was also about how to keep it clean and safe for people and animals. We made charts about the good and bad things in it. We also learned that the biggest problems about the lake are Asian clams, and zebra mussels. We learned that there was a very expensive, but simple way to get rid of them. The city would have to pay to get it done though, we would have to take a lot of the water out of the lake and the zebra mussels and asian clams would not be able to reproduce. Did you know that zebra mussels have over 10,000 babies a year each? If they couldn't reproduce, they would eventually die out.

All of the booths were very exciting, but I learned the most interesting things at SCUBA. I enjoyed the Cayuga County Conservation Field Days so much! It was so fun.
